# Skin, Brand, and the Earth

For all consumers to have a tomorrow to look forward to.

CELIGIN's tomorrow refers to the three types of future for the customers.

-

First, a future for the remarkable change of the skin

Second, a future for the continuous growth of our brand

Third, a future for the well-being of the Earth

-

CELIGIN will continue the endless effort to pursue our tomorrows.

# Look Forward To Tomorrow

**CELIGIN is against  
on animal test**

**Printed package  
with SOY INK**

**Used FSC-certified  
paper on the package**

**Dermatest completed**

**European Cosmetics Certifier  
Registered with CPNP**

CELIGIN

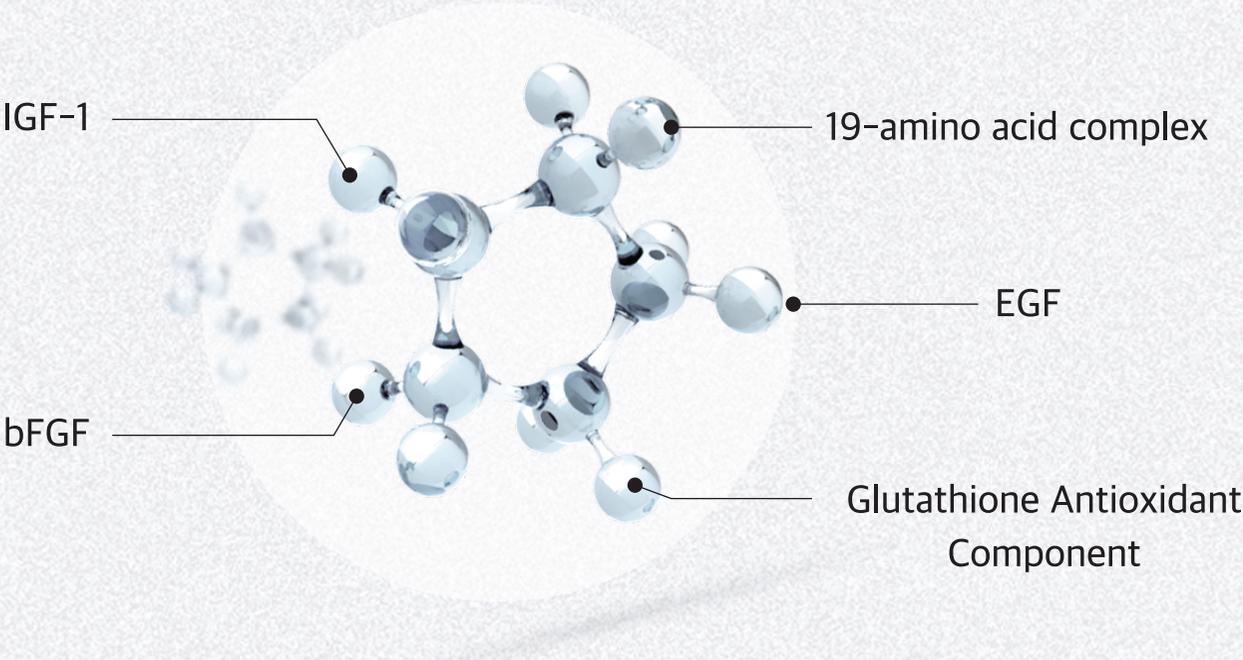

**MAIN INGREDIENT**

LOOK FORWARD TO TOMORROW

**Main Ingredient**

CELIGIN'S INDEPENDENT INGREDIENT

# CosCor

**Bio Cosmetic Material  
Based on Serum-Free Medium**

Activate skin regeneration with no chemical composition based on serum-free medium material

# Extraordinary newness CosCor

## What makes it different from regular stem cell ingredients?

Removed the problems of regular stem cell ingredients, and maximized the content of active ingredients!

### CosCor

**Does not undergo cell culturing process.**

Does not include animal serum.  
With minimized animal-derived ingredients,  
there is a low risk of causing  
**side effects in the body.**

**Maximized content of active ingredients** through  
artificial medium technology, with guaranteed effects.

Composed of 43 ingredients selected  
by bio-ingredient experts.  
Does not include unidentified ingredients.  
Only includes **highly safe ingredients.**

VS

Cell culture

Derived ingredients

Active ingredients

Safety

**Ingredient of culture medium for regular stem cells**

Uses a culture medium that has **undergone cell culturing process**

Different animal-derived additives,  
such as cattle embryo serum, are used during cell culturing.  
The additives can cause **allergies and other side effects** in the body.

Several ingredients in small quantities are mixed.  
Due to the minimal content of the ingredient,  
**the effectiveness of the cosmetic is not guaranteed.**

A **potential threat** of containing **unidentified ingredients**,  
as the by-product after cell culturing process is used  
as the main ingredient.

# Main Ingredient

The more you know, the more useful it gets!

The wonderful effects of **CosCor**

## The skin of a new-born baby...!

The main ingredient of cosmetic injections!

3 core growth factors for skin regeneration with

high anti-aging effects (EGF+Bfgf+IGF)

43 active ingredients including vitamins for

skin supplement and amino acids

## The more the merrier?

No! They must be well-matched!

Professionally developed golden ratio optimized for anti-aging

## Not one ingredient has been overlooked!

Consists only of ingredients registered in the

International Cosmetic Ingredient Dictionary (ICID)

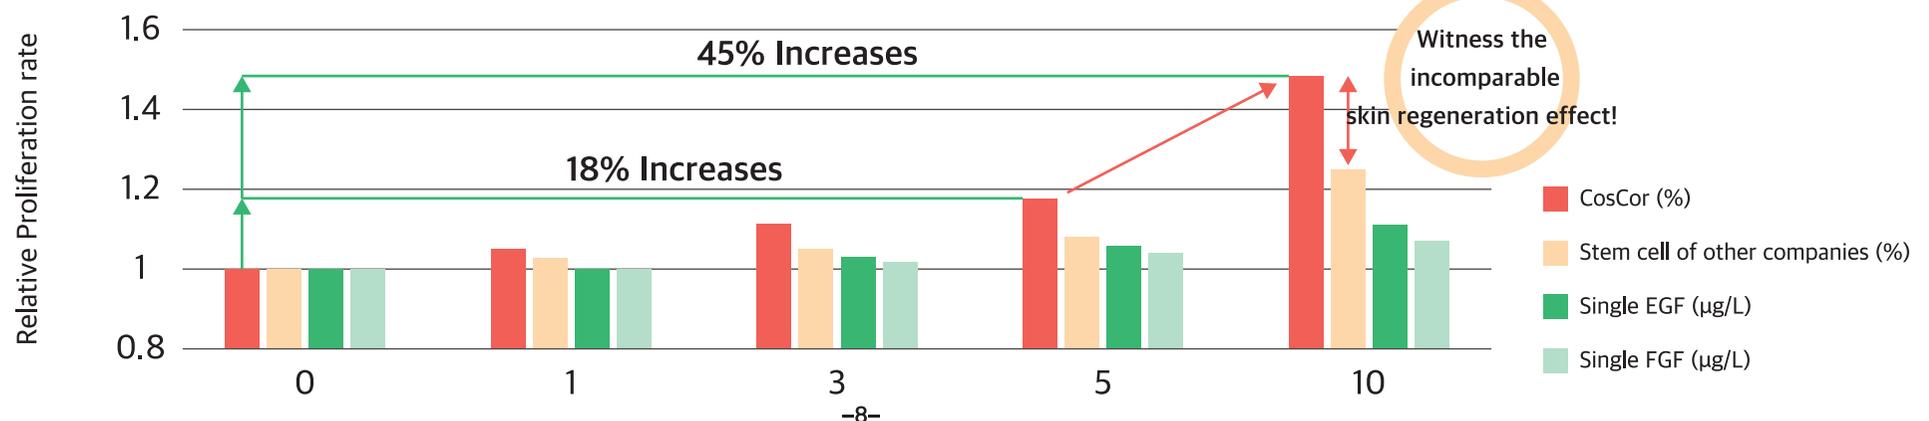

## A good ingredient useless unless it can reach the skin!

The low molecular weight composition of less than 500Da enters deep into the skin

## Animal-derived stem cells? NO WAY!

Plant-derived stem cells, with ZERO worries, HIGHER stability!

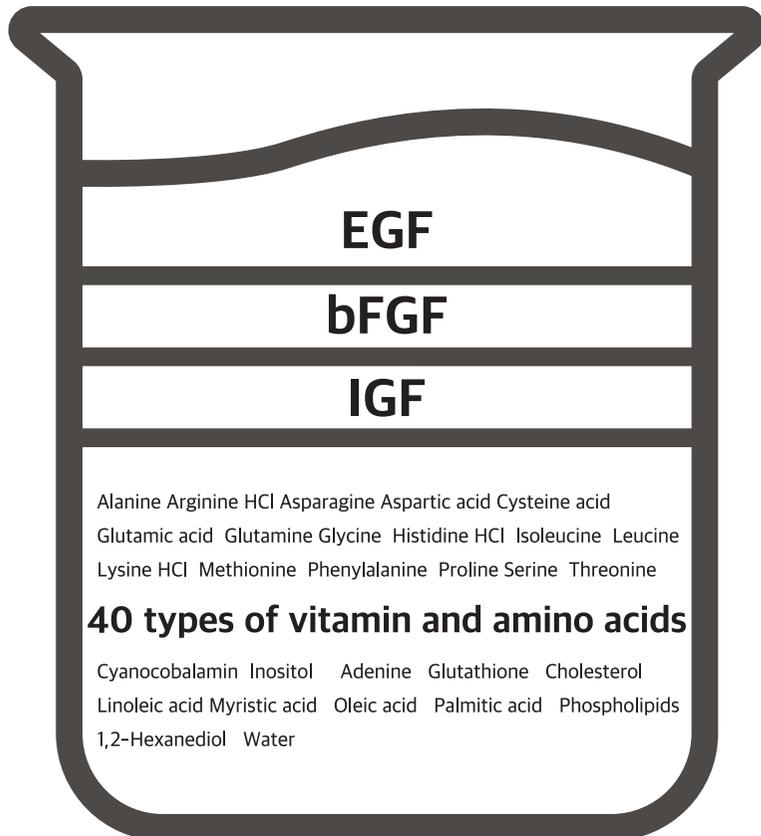

## Enhances formation of fibroblasts in the skin cells

# Main Ingredient

Anti-aging ingredients with all the goodies to form the golden ratio!

Dermatologic regenerating cream ingredients

## Essential ingredients to boast of!

The top three core growth factors,  
EGF,bFGF,IGF

+

40 types of vitamin and amino acids

## #What is the 'Growth Factor'?

It is a factor that stimulates cell growth.  
Growth factor accelerates  
the skin regeneration cycle.

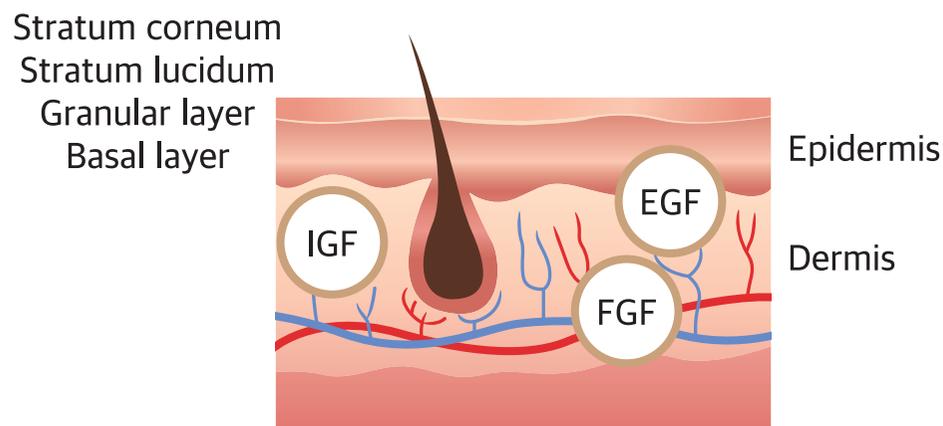

The birth and death of cells happen in  
a span of two weeks.

Old cells that form the epidermis  
shed off in a natural process.

If the shedding process does not occur naturally,  
the old cells will pile up,  
blocking the pores and causing wrinkles.

# Introducing the 3 core growth factors of the skin

## EGF, FGF, IGF

[The picture above is a reference material to assist the understanding of the ingredients.]

### 1) EGF: Epidermal Growth Factor

- ✓ Works on epidermal layer
- ✓ Strengthens skin barrier, improves skin texture
- ✓ Accelerates skin regeneration
- ✓ A dermatologic ingredient prescribed after epidermization and laser peeling procedure.

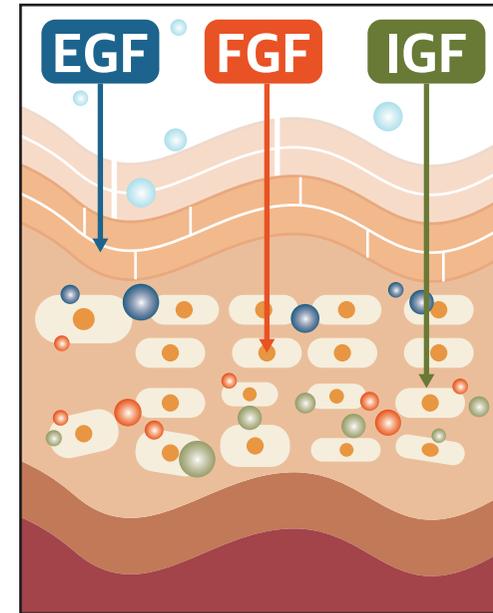

### 2) bFGF: basic Fibroblast Growth Factor

- ✓ Works in the dermal layer
- ✓ Activates collagen and elastin
- ✓ Higher regenerative effects when used together with EGF

### 3) IGF : Insulin like Growth Factor

- ✓ Works deeper in the dermal layer
- ✓ Boosts the anti-aging effects of EGF and FGF
- ✓ Commonly found in hair loss prevention shampoos

# Multiple Growth Factors only in CELIGIN

Will aging only cause stunting in one growth factor?

**NO!**

All growth factors in our skin are inhibited when we age!

**Also, the location of absorption and activation differs according to the type of the growth factor.**

So, you will get the best result when the three growth factors works together.

**This is only made possible with CosCor.**

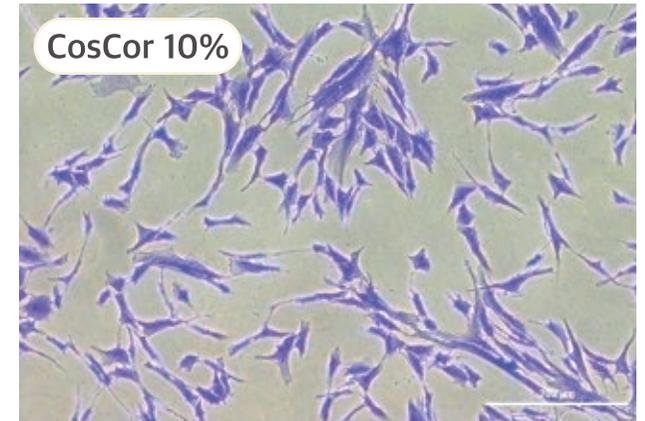

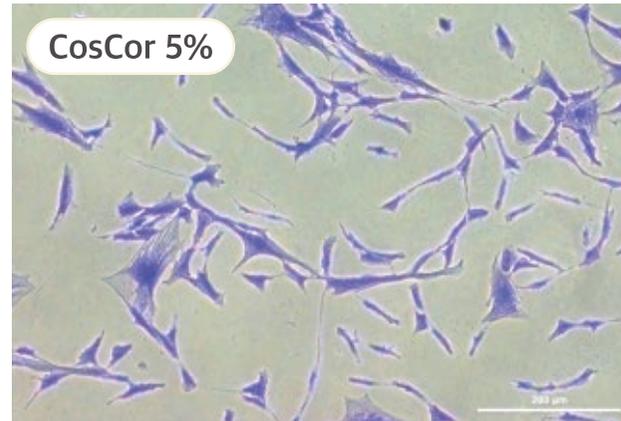

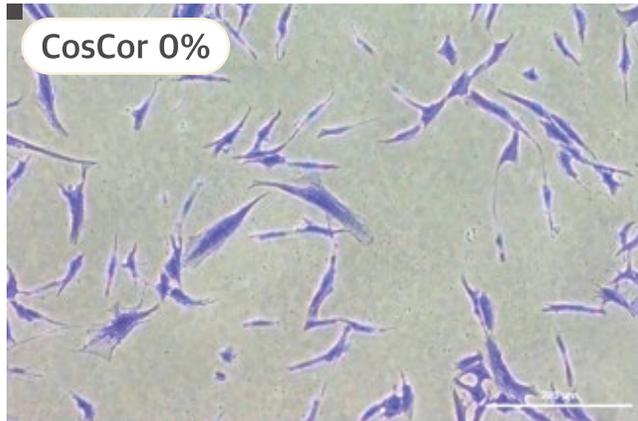

Are you sick of so many cosmetics? Then the answer is

# Always CosCor.

The permanent entrance to anti-aging. There is no exit.

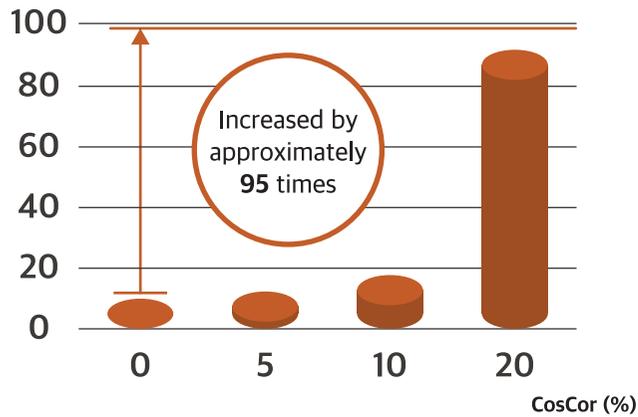

## Skin regeneration effect in skin cells

150% Improves

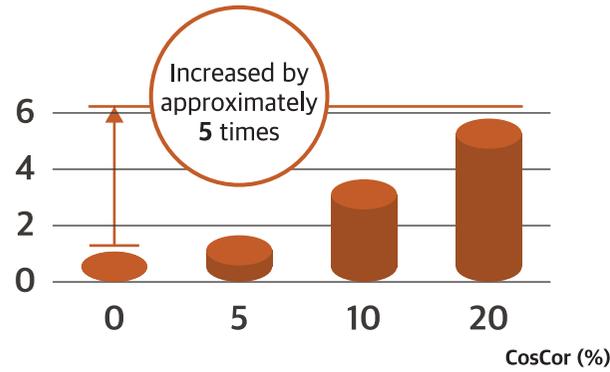

CosCor helps skin cell proliferation, effective in **skin regeneration**.

# Effective in strengthening the skin barrier

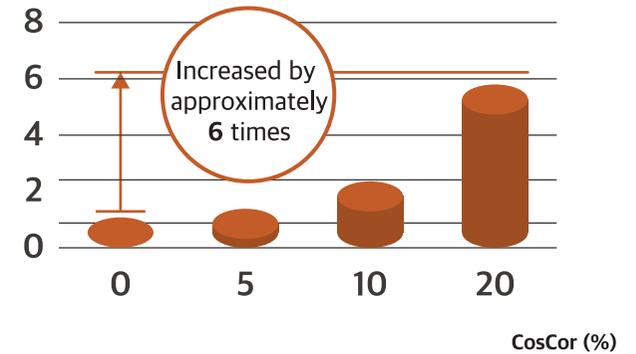

**Involucrin**

Involucrin increased by approximately 5 times, helps strengthen the keratin layer that holds the cells together.

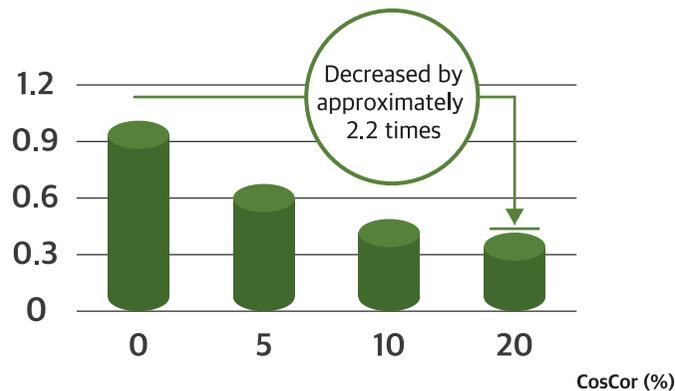

**Filagrin**

Protein that increases adhesion between keratinocytes the role of helping the stratum corneum become strong

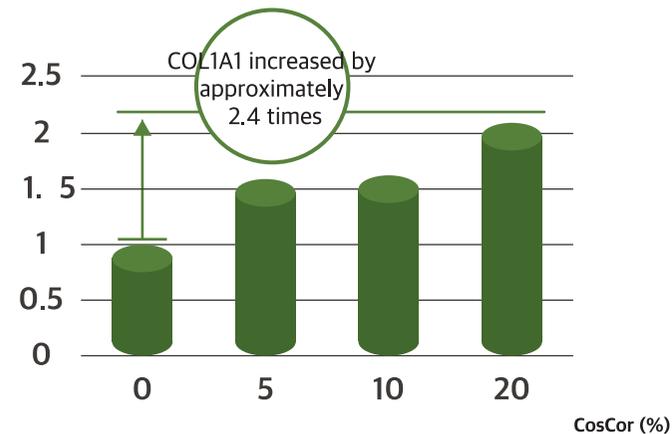

**Loricrin**

The protein component of the outermost layer of the skin that affects the function of the skin barrier

**MMP1 (Matrix metalloproteinase-1)**

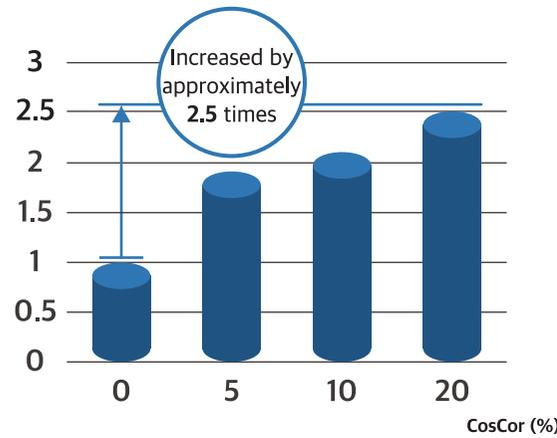

Increase in MMP1 will break down collagen, resulting in the loss of skin elasticity.

**COL1A1**

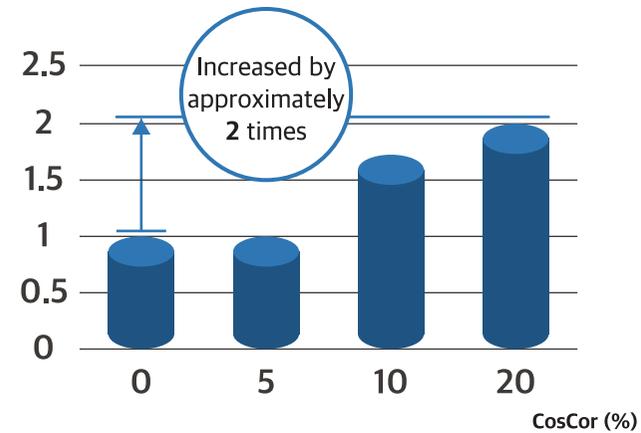

Enhances skin elasticity by aiding in collagenases

# Excellent moisturizing effects

## HAS2 (Hyaluronic Acid Synthesis 2)

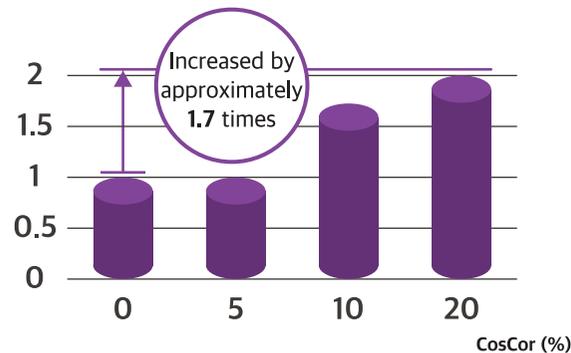

It is a synthetase of hyaluronic acid in the body.  
More expression of the enzyme will create more hyaluronic acid that aids in skin moisturization.

## AQP3 (Aquaporin3)

The protein delivering moisture and glycerol onto the epidermis.

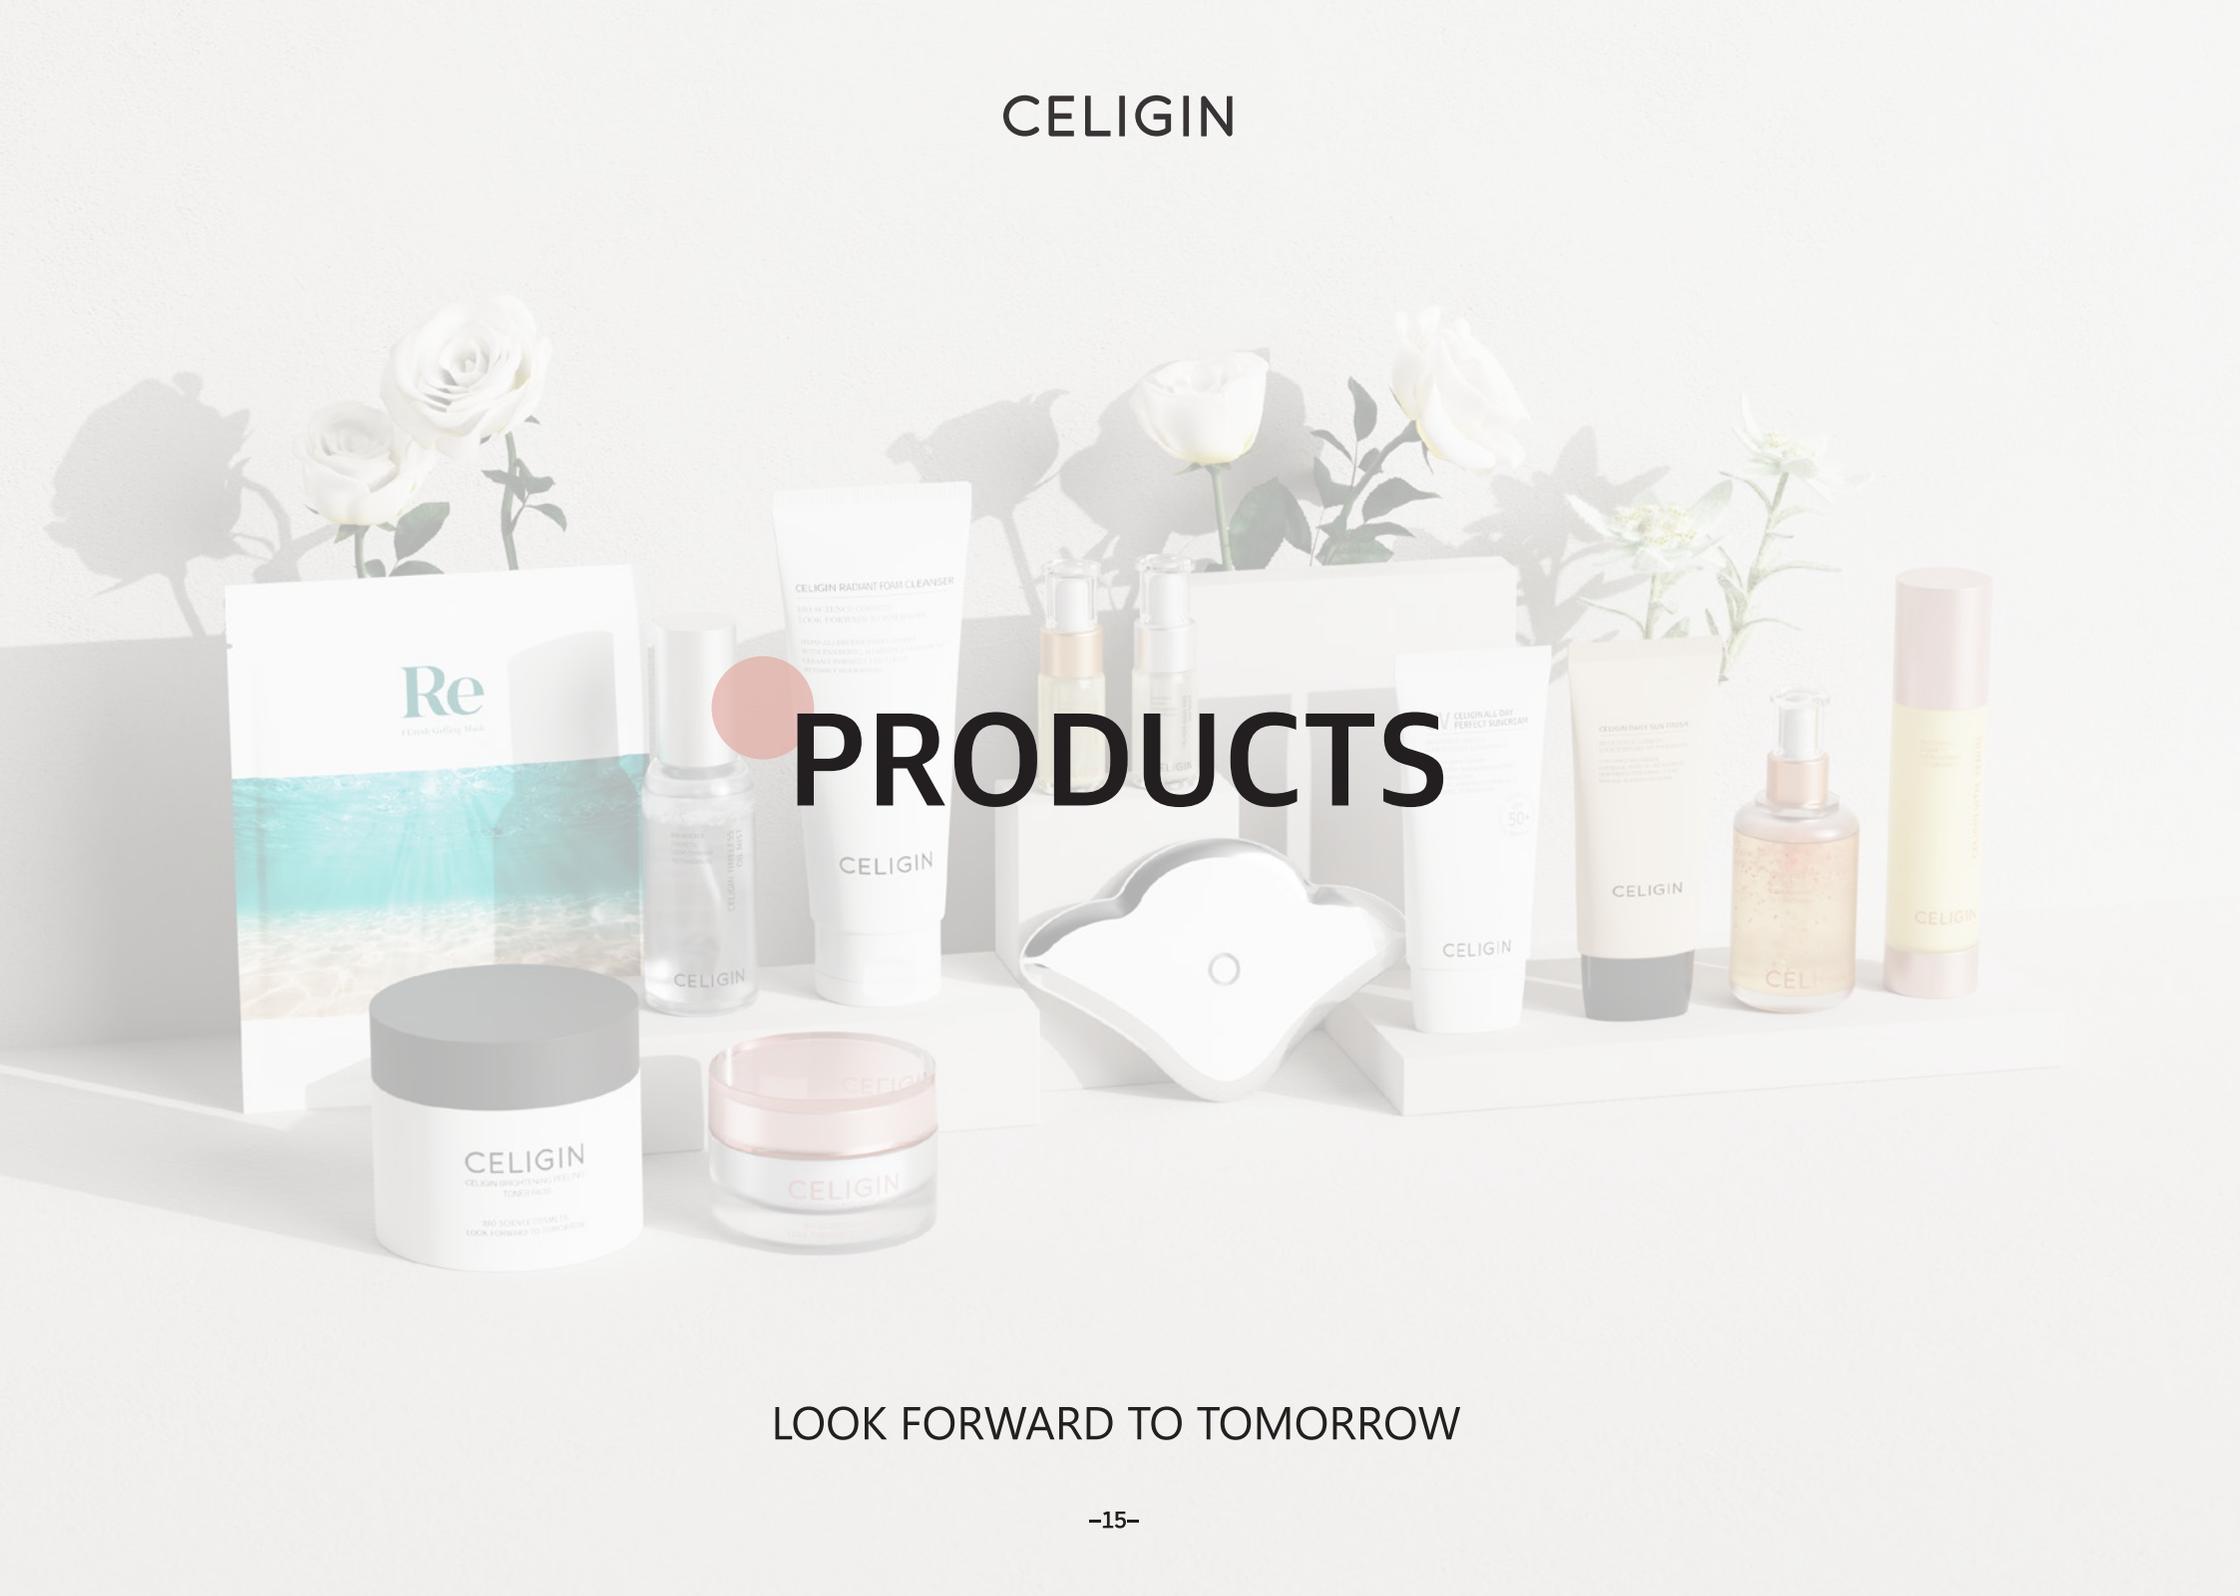

# Enhancing Fibroblast Proliferation

## HA (Hyaluronic Acid)

Protein with strong water retention serves as a major moisturizer outside the dermis and epidermal cells
